- Study area
- Other roads
- Eastern gas pipeline
- South Coast Railway
- Residential area
- Waterbody
- Wetland
- National parks/reserves
- Elevated areas
- Council border
- Local Aboriginal Land Council

Acid Sulfate Soil Depth
- 0 to 1m
- 1 to 2m
- 2 to 4m
- > 4m
- Bottom sediments
- Beach

Acid Sulfate Soil Risk
- High risk
- Medium risk
- Low risk

The representation of the Eastern Gas Pipeline shown on this map was derived from data supplied by Alinta Asset Management (AAM). AAM makes no representation as to the accuracy of the pipeline shown on this map.

Notes:
- Some risk of acid sulfate soils and potentially soft soils in low-lying areas of Toolooa.
- High risk of acid sulfate soils close to the surface and potentially soft soils east of the railway line.
- Low risk of acid sulfate soils and potentially soft soils associated with the lower reaches of Broughton Creek floodplain.
